

**To Avner Algom, Noam Ordan and the entire IAHLT team,**

I am writing to express my sincere gratitude and to recommend the Israeli Association of Human Language Technology (IAHLT) for their exceptional support and collaboration in our recent project on developing a state-of-the-art speech-to-text (STT) model for the Palestinian Arabic dialect.

Dixilang has been committed to advancing language technology, and our collaboration with IAHLT was crucial in achieving a significant milestone in our efforts. The IAHLT team demonstrated profound expertise and dedication by assisting us in the collection and tagging of data in Palestinian Arabic. Their adherence to stringent data standards ensured the high quality and reliability of the dataset, which was pivotal for the successful training of our STT model.

The professionalism and meticulous attention to detail exhibited by the IAHLT team were exemplary. They not only facilitated the collection of a comprehensive dataset but also ensured its alignment with the specific linguistic characteristics and nuances of the Palestinian Arabic dialect. This has significantly enhanced the accuracy and performance of our STT model.

We are immensely pleased with the results of our collaboration and are grateful for the expertise and commitment shown by IAHLT. Their contribution has not only accelerated our project timelines but has also elevated the quality of our technological outputs.

I am confident that IAHLT will continue to be a valuable partner to companies and institutions aiming to innovate and excel in the field of ASR. Their dedication and expertise make them a commendable ally in any endeavor requiring meticulous data collection and processing in the realm of human language technology.

Sincerely,

Keren Bar
